

## Unipolar Hall Effect Switch

### ❖ GENERAL DESCRIPTION

MA7010 is an unipolar Hall effect sensor IC. The device includes an on-chip Hall voltage generator for magnetic sensing, a comparator that amplifies the Hall voltage, and a Schmitt trigger to provide switching hysteresis for noise rejection, and open-drain output. An internal band-gap regulator is used to provide temperature compensated supply voltage for internal circuits and allows a wide operating supply range.

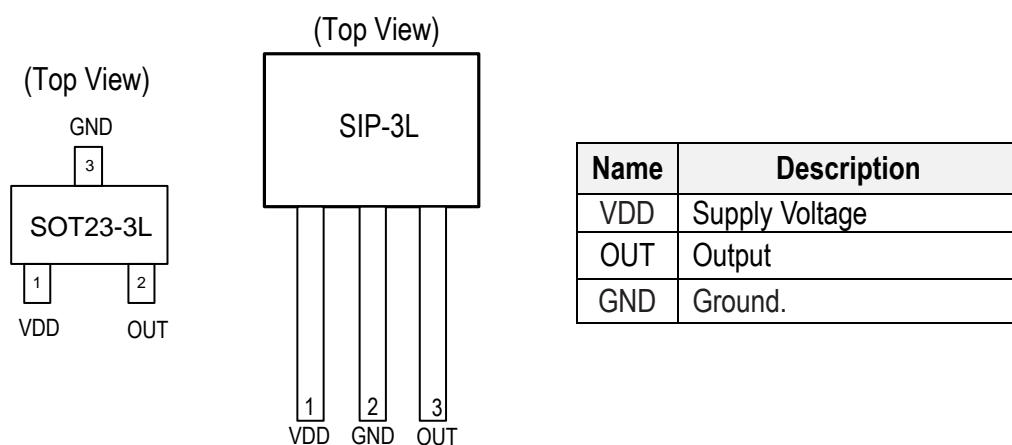

If a magnetic flux density larger than threshold  $B_{op}$ , OUT is turned on(low). The output state is held until a magnetic flux density reversal falls below  $B_{rp}$  causing OUT to be turned off (high)..

### ❖ FEATURES

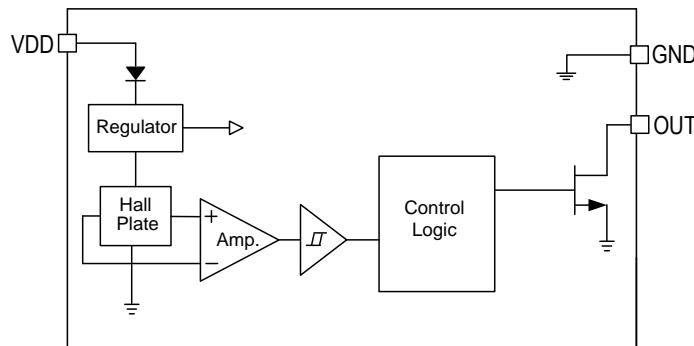

- 2.5V to 26V DC operation voltage
- Temperature compensation
- Wide operating voltage range
- Open-Drain pre-driver
- 25mA maximum sinking output current.
- Low Profile SOT23-3L and SIP-3L(TO-92S) Package( Green and Lead Free )
